Good

APK Steps

First of all we run the code of dart in vs code. we build a drawer in which 2 options one is calculator and 2nd is GPA of a student.

For making the APK file I run flutter doctor command. Some issues I faced. I solve the licences issue. for change the name and icon of APK I edit the name and upload icon in .xml file that is located flutter > project > App > android > manifest.xml file. After this I run "flutter build apk" and install and run APK. App's name is Mol.
